Reseñas Autores

Abedrapo Rojas, Jaime. Doctor en Derecho Internacional y Relaciones Internacionales del Instituto Universitario Ortega y Gasset – Universidad Autónoma de Madrid. Cientista político y periodista de la Universidad Gabriela Mistral, exsubdirector de la Academia Nacional de Estudios Políticos y Estratégicos del Ministerio de Defensa Nacional, exdelegado del Ministerio de Defensa ante la UNASUR. Actualmente director del Centro de Derecho Público y Sociedad de la Universidad San Sebastián. Entre sus obras destacan el “Derecho al Desarrollo de los Pueblos” de Editorial lo Blanch (2019), coordinador de “Chile y las Reformas Políticas Pendientes. Propuestas para mejorar la gobernabilidad del país” Ediciones USS (2025), entre otras.

Arqueros, Claudio es Doctor en Filosofía por la Pontificia Universidad Católica de Chile, es Magíster en Filosofía por esa misma casa de estudios, Magíster en Filosofía por la Universidad de Chile, y Licenciado en Educación y Profesor de Filosofía por la UMCE. Actualmente se desempeña como director de Formación del Centro de estudios Fundación Jaime Guzmán (Chile), profesor de la Facultad de Derecho y Gobierno de la Universidad San Sebastián y profesor del doctorado en comunicación de UFRO. Ha sido profesor del Magíster en comunicación política de la Universidad de Chile. Fue Visiting Fellow en la University of Notre Dame, EE.UU. bajo el nombramiento Fulbright Chair in Democracy and Human Development. Desarrolló una investigación postdoctoral en la Università di Roma, “Sapienza”. Ha sido coautor, editor y compilador de varios libros sobre Filosofía y teoría política.

Bunker, Kenneth es académico, consultor y columnista. Tiene un doctorado en Gobierno y una Maestría en Investigación en Ciencia Política de la London School of Economics, así como una también un Master of Arts en Ciencia Política de

San Diego State University. Es profesor asociado en el Departamento de Economía y Gobierno y director del Laboratorio de Democracia y Gobierno en la Universidad San Sebastián. Su trabajo académico se ha centrado principalmente en los sistemas electorales, los partidos políticos y las elecciones en nuevas democracias, y ha sido publicado en algunas de las principales revistas de ciencia política. También ha ocupado posiciones como profesor visitante en la Universidad Sapienza y la Universidad de Milán en Italia. Fuera de la academia, es fundador y Director de la consultora Politico Tech Global y creador y Director Ejecutivo de Tresquintos. Es columnista del diario chileno Las Últimas Noticias y Ex-Ante, y comentarista político permanente en medios dentro y fuera de Chile.

Cofré Lagos, Benjamín es Dr. (c) en Historia por la Universidad San Sebastián, profesor de Estado en Historia y Ciencias Sociales por la Universidad de Santiago de Chile. Actualmente se desempeña como investigador y coordinador de Formación en la Fundación Jaime Guzmán.

Fuentes Caro, Eduardo es doctor en filosofía por la Universidad de los Andes, y actualmente se desempeña como director del Instituto de Filosofía de la Universidad San Sebastián, Chile. Se especializa en filosofía política contemporánea, especialmente en la discusión sobre la tolerancia, teoría representativa, y concepciones de respeto político. Ha publicado artículos académicos en revistas especializadas y capítulos de libros en su área de especialización. Está ejecutando el proyecto Fondecyt Iniciación11230139 “PLURALISMO Y TOLERANCIA. UN MARCO RESPETUOSO DE TOLERANCIA ACTIVA”.

Jofré Rodríguez, Hugo es Administrador Público de la U. Chile. Magíster en Políticas Públicas, FEN U. Chile. Doctorando en Ciencia Política, Universidad de Rostock, Alemania. Profesor Asistente, Universidad San Sebastián y Presidente Asociación Chilena de Ciencia Política (ACCP). Últimas publicaciones: Jofré, H. (2024). Reclutamiento de agentes para

el centro de gobierno en gobiernos de derecha en Argentina, Uruguay, Chile y Perú. *Estudios Internacionales*, 56(209), 95–118. Jofré, H., & Navia, P. (2024). The Impact of Turnout in Optional Simultaneous Presidential Primaries on the Vote Share for the Coalition Candidate in the General Election: Evidence from Chile's Two-Round System. *Colombia International*, (118), 59-84. <https://orcid.org/0000-0003-0699-9401>.

Miranda Toledo, Diego está Doctorando en filosofía por la Universidad San Sebastián y Magister en teología por la Pontificia Universidad Lateranense de Roma. Obtuvo su Bachillerato en teología en la Pontificia Universidad Católica de Chile y es Licenciado en Trabajo social por la Universidad Tecnológica Metropolitana. Se desempeña como docente en la Pontificia Universidad Católica de Chile y en la Universidad Alberto Hurtado. Sus áreas de docencia e investigación son la Doctrina social de la Iglesia, la Filosofía política y la Historia de la cuestión social.

Padilla-Lobos, Diego es Psicólogo y Doctor en Sociología por la Pontificia Universidad Católica de Chile, con una trayectoria que articula la práctica clínica, la investigación crítica y la docencia universitaria. Antes de iniciar su doctorado, acumuló más de una década de experiencia en el ámbito psicosocial, desempeñándose en contextos clínicos y comunitarios, con un rol destacado como delegado de libertad asistida en el sistema de justicia penal juvenil de Chile. Esta labor le permitió vincularse con las complejidades institucionales y subjetivas del fenómeno delictual, experiencia que luego influiría en sus intereses de investigación. Como académico, actualmente se desempeña como profesor de Psicología Social y Problemas Psicosociales en la Universidad San Sebastián (Psicología, sede Valdivia), donde integra perspectivas interdisciplinarias en sus cátedras. Sus investigaciones se centran en tres ejes principales: 1) Criminología Cultural, donde analiza las narrativas simbólicas y prácticas culturales en torno al delito y el control social; 2) Psicología Social sociológica, explorando la intersección entre

estructuras macrosociales y subjetividad; y 3) Fenomenología Hermenéutica, como herramienta para deconstruir experiencias vividas en contextos de vulnerabilidad.

Pérez Lasserre, Diego es Doctor en Filosofía por la Universidad Diego Portales y Fern Univerrstät in Hagen, Alemania; magíster en Pensamiento Contemporáneo por la Universidad Diego Portales; licenciado en derecho por la Pontificia Universidad Católica de Chile. Docente investigador de la Universidad San Sebastián. Entre sus publicaciones destacan: *Existential Openess in Law: a hermeneutical approach to Carl Schmitt's early legal thought* (libro aceptado en editorial Peter Lang), "Humanidad y Derecho: una lectura temprana de Schmitt" (*Díkaion* 31, 2, e3123), "Determining and Reflective judgments: two modes of understanding legal decisions", *Acta Baltica Historiae et Philosophiae Scientiarum* (7, N.º3: 23-4), entre otras.

Polga-Hecimovich, John es Profesor Asociado de Ciencia Política en la Academia Naval de los Estados Unidos, donde imparte cursos sobre política comparada y política latinoamericana. Su investigación se centra en los efectos de las instituciones políticas en la estabilidad democrática, la formulación de políticas y la gobernanza, con un enfoque especial en América Latina. Estudia la dinámica del poder ejecutivo, la estabilidad presidencial y las instituciones electorales. Su trabajo ha sido publicado en numerosas revistas académicas, como *The Journal of Politics* y *Political Research Quarterly*. Además, ha coeditado un libro sobre la consolidación autoritaria en Venezuela y está trabajando en un manuscrito sobre la gobernanza presidencial en América Latina. Polga-Hecimovich ha brindado informes a diversas agencias del gobierno de los Estados Unidos y ha servido como experto en sistemas electorales para la Organización de los Estados Americanos (OEA).

Reyes, Joaquín es abogado. PhD in Law, Universidad de Edimburgo. LLM by Research in History and Philosophy of

Law, Universidad de Edimburgo. Licenciado en Derecho, Pontificia Universidad Católica de Chile. Licenciado en Filosofía, Pontificia Universidad Católica de Chile. Investigador, Facultad de Derecho, Universidad San Sebastián.

Silva, Luis Alejandro es Doctor en Derecho Constitucional. Profesor universitario por más de 20 años. Autor de varios libros, entre los que destaca “Entre la Justicia y la Ley” (2021). Ha publicado decenas de artículos en revistas especializadas. Fue Consejero Constitucional en el proceso constitucional de 2023.”

REPRESENTATION AND PARTY DYNAMICS

This chapter explores the emergence of party landscapes in new democracies, drawing on institutional and sociological frameworks to explain the origin and shifts in party structures. While these theories are crucial for explaining variations in the size of the party system and identifying the fault lines of elec-

toral competition, additional factors are needed for a comprehensive account of the resulting party landscape. This chapter addresses a gap in political party scholarship by highlighting the importance of political ideas, often expressed through political leaders, their legacies and mechanisms of representation in explaining why some parties emerge and others fade.

One dominant line of thought suggests that significant reform to electoral institutions will eventually result in party system transformation. In other words, a change in the electoral system will inevitably result in a change in the party system¹. An equally dominant explanation is that shifts in sociological fault lines naturally generate new party system landscapes. That is, major social cleavages are ultimately what sort parties out². A “third way”, based on the interaction between these two major theories, is an even more comprehensive predictor of party system dynamism than either theory individually³.

While the interaction of institutional and sociological factors helps explain party system realignment, we argue that scholars should also consider the role of political ideas, par-

ticularly by examining the influence of leaders and their legacies, as a key factor in why some parties succeed and others fail. Political ideas are solidified through politicians which have strong interests in cultivating a positive, broad, and enduring legacy which can influence policy debates long after they leave office⁴. Additionally, social psychologists and political sociologists demonstrate how salient political figures and notable events—such as wars, popular leaders, and political scandal—can shape the collective memory⁵.

We hypothesize that as the interaction of electoral institutions with social cleavages explains the expansion or collapse of party systems, political ideas are key to defining partisan survival. To test this, we analyze patterns of party competition in Chile since the inception of the Republic, with a focus on the post-1989 transition era. Our analysis reveals four different partisan realignments, each driven by a combination of institutional, sociological, and ideational changes.

The chapter proceeds as follows. In the next section we synthesize the conventional wisdom regarding causes of party system change and highlight the gap that exists between existing explanations and the survival or demise of parties in practice. Following this, we discuss the role of political leaders' ideas and their legacies, suggesting a mechanism through which they can

influence the shape and size of party systems. Next, we present an empirical puzzle, summarizing the evolution of Chile's party system and applying Taagepera's⁶ Seat Product Model to ascertain how much party system fragmentation can be predicted by institutions and how much remains unexplained. In the fourth section, we provide an explanation of how institutions, cleavages, and political ideas fit together to explain four periods of Chile's party system from 1891 to 2013, and in section five we illustrate how these same factors suggest that the party system is slowly moving away from the legacy of the Augusto Pinochet dictatorship. The sixth section concludes by discussing the implications of this chapter.

ELECTORAL RULES, SOCIAL CLEAVAGES, AND THE GAP BETWEEN EXPECTATIONS AND REALITY

Several theories seek to explain the origins of party systems. The institutionalist theory, initially set forth by Duverger⁷, was the first to suggest a causal relationship between electoral institutions and the party system. This theory, often criticized as a "law," was derived from the observation that single-member districts tend to produce bipartisan competition, and that as their magnitude increases, the number of competing parties also increases⁸. Further expansion of this theory identified

new independent variables, such as the electoral formula and ballot structure⁹, assembly size¹⁰, and the seat product¹¹.

For Duverger, the relationship between electoral systems and party systems was mediated by mechanical and psychological effects¹². While the psychological effect deals with the shaping of party and voter strategies in anticipation of the electoral function's mechanical constraints, the mechanical effect describes how the electoral rules constrain the seats that can be awarded from distributions of votes¹³. Some find ample support for both of these effects¹⁴. Others note how weak the evidence is outside the United States¹⁵.

The institutional approach is not the only one that seeks to explain the origin of the party system. Lipset and Rokkan's¹⁶ seminal piece suggests that politically salient social cleavages are what determine a country's party system as well as voting behavior by dividing voters into blocs. The authors suggest that there are four major politically salient social cleavages that divided voters upon the massification of politics in Europe: center-periphery, church-state, capitalist-worker, and landowner-farmer. Colomer and Clark and Golder¹⁷ among others, expand on this view, suggesting that it is ultimately societal change that defines institutions and not the other way around.

The combination of these theories seems to be more powerful than either of them on their own¹⁸. With evidence from the construction of party systems in some European democracies, Ordeshook and Shvetsova¹⁹ show that both sociological and institutional elements are necessary to understand why party systems emerge and fade away. This same argument is refined by Amorim Neto and Cox and Cox²⁰, using sociological variables such as ethnic cleavages, and institutional variables such as electoral rules to explain their multiplicative effect on the number of parties that compete. Some argue that only when both elements are present is it both theoretically correct to

¹⁶ Lipset and Rokkan, *Cleavage Structures, Party Systems, and Voter Alignments*.

¹⁹ Ordeshook and Shvetsova, "Ethnic heterogeneity, district magnitude, and the number of parties".

²⁰ and Cox, *Making Votes Count*.

make inferences, and empirically possible for a party landscape to incur permanent changes²¹.

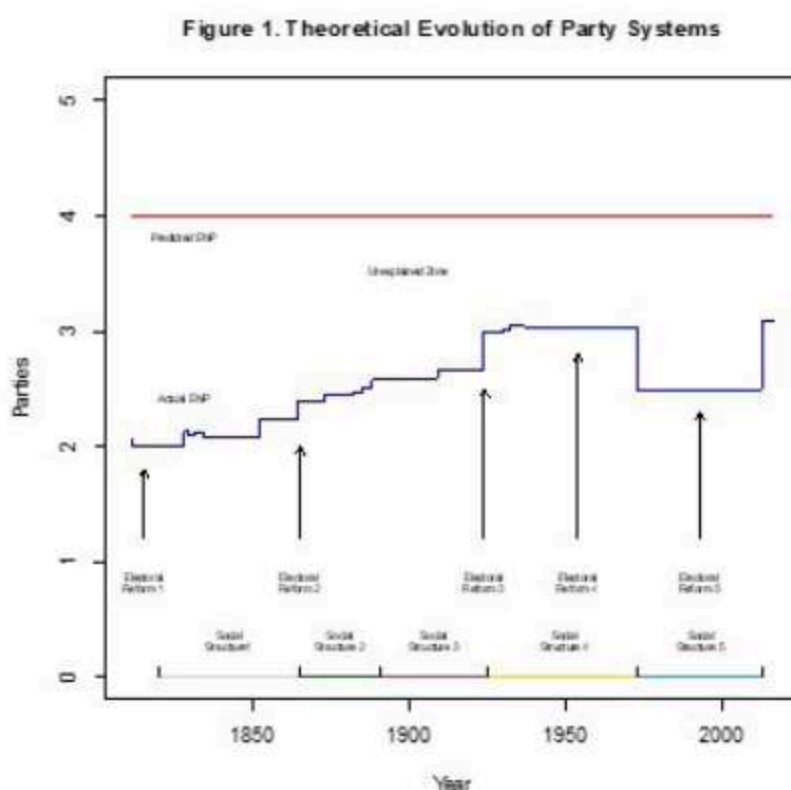

From this, it can be deduced that when a permissive, or candidate-centered, electoral system replaces a restrictive one, the size of the party system is expected to increase²². Likewise, when a new social cleavage emerges, the balance of power will recalibrate, naturally forcing some parties out of the system and inviting others in. However, neither of these variables, nor their interaction, perfectly predicts the evolution of party systems. Indeed, it is often the case that more parties compete in elections than are expected to do so. Furthermore, it is also often the case that parties that are expected to perish instead consolidate, and those that are expected to rise in the face of new social demands fail to do so.

Figure 1 illustrates this theoretical situation. It shows how the expected number of parties that compete in elections, as determined by the interaction of electoral rules and social

²¹ Matthew Singer, "Was Duverger correct? Single-member district election outcomes in fifty-three countries", *British Journal of Political Science* vol. 43, n. ° 1 (2013): 201–220; Jan Teorell and Catharina Lindstedt, "Measuring electoral systems", *Political Research Quarterly* vol. 63, n. ° 2 (2010): 434–448.

²² A permissive electoral system is generally understood as one that tends to incentivize large party systems. In contrast, a restrictive electoral system is one that tends to reduce the number of political parties that compete in elections and gain representation. They are generally used in comparative way. For example, to understand if a given electoral system is permissive or restrictive, the multiplicative effect between the assembly size and the district magnitude can be used. Shugart and Taagepera, *Votes from Seats*. If the product of multiplying the elements in the second electoral system is larger than the product of multiplying the elements of the first electoral system, the latter can be said to be more permissive than the former. In practical terms, this means that the second electoral system produces more incentives for party fragmentation than the former.

cleavages (blue line), can deviate from the actual number of parties that compete (red line). If the interaction between institutions and cleavages perfectly explained the evolution of the party system, the lines would overlap perfectly. However, in practice they often diverge, as more or fewer parties compete in elections than what is predicted. The same tends to occur with the number of parties that gain legislative representation. Why does this happen?

Part of the answer lies in theories of electoral behavior, particularly the difference between psychological and mechanical incentives in electoral systems. While more parties compete than those with real chances of representation, one might expect the blue and red lines to evolve proportionally, with the gap following a parallel trend. However, this is not the case; the lines diverge. This suggests that the expected number of parties cannot be fully explained by the interaction of institutions and social cleavages alone—there must be an additional, unmeasured factor at work.

The framework discussed suggests that variations in party system size are best explained when electoral reforms and sociological cleavages coincide. For instance, shifting from a majoritarian to a proportional electoral arrangement following a massive rural-urban migration will likely force changes in the party system. This shift not only lowers entry barriers but also introduces new parties that were not previously viable. However, while this interaction predicts the emergence of new parties, it does not specify which ones will rise.

SHAPING THE SYSTEM FROM THE TOP-DOWN: POLITICAL LEADERS, ACTIVE IDEAS AND LEGACIES

We propose that variations in the size and shape of party systems are influenced not only by electoral reforms and sociological shifts, but also by political leaders, their ideas, and political legacies. In this way, political leadership, encompassing not just ideology but also rhetoric and style, exerts a significant influence on mass partisanship distinct from that of a politically salient social cleavage. This serves as a mediating factor to account for patterns specific to the type of political parties that ascend to and descend from power.

One version of this is articulated in Mannheim's²³ generational theory of political change, which maintained that early formative experiences stamp different generations with distinctive political attitudes and beliefs. Specifically, the durable long-term effects of "generational imprinting" appear as systematic variations in aggregate partisanship, reflecting the

²³ See Karl Mannheim, "The Problem of Generations", in *Essays on the Sociology of Knowledge: Collected Works*, ed. Paul Kecskemeti (New York: Routledge, 1952 [1928]).

era when citizens first came of political age²⁴. Studies from the United States suggest that the influences of political environment are most noticeable among new voters, whose partisan attachments often bear the stamp of the political zeitgeist that prevailed when they reached voting age²⁵. Voters who came of age during the Depression and New Deal, for example, leaned Democratic for their entire lives, while those who grew up during the Reagan era lean to the right. Similarly, in new democracies, studies have shown generational differences in attitudes towards democracy may reflect the political regime under which the respondent came of political age²⁶. Crucially,

these generational changes are different from cleavages which divide the electorate.

It follows that political leaders and their legacies also help mold their party systems. In a series of works, Jacobson²⁷ argues that the perceived successes or failures of U.S. presidents have a durable influence on their party's popularity, reputation for competence, perceived ideology, and electoral fortunes. In a multiparty context, presidents and their political legacies may influence not just their own party's fortunes but also the transfer of votes to and from other parties—impacting the size and ideological distribution of the party system without electoral reform or the addition or subtraction of a political cleavage.

This conceptualization of political ideas differs from social cleavages. We understand the former to be based on a specific rhetoric, ideology, or political personality, and its organization emanates from the top-down, while the latter is bottom-up in origin and each group is organized around some fundamental distinguishing trait, such as territory or social class. Following this, we believe that strong leaders, personalists, and populist politicians should find it easier to generate these ideational differences and re-structure party systems than their programmatic counterparts. With authoritarian leaders, for instance, a lack of democratic pluralism tends to create a bifurcated society of supporters and dissenters. This not only divides society under autocracy, but after the return to democracy, where the party system often takes on an oppositional structure featuring a pro-democracy bloc and dictatorial-apologist bloc. Similarly,

²⁷ Gary Jacobson, "The Effects of the George W. Bush Presidency on Partisan Attitudes", *Presidential Studies Quarterly* vol. 39, n. ° 2 (2009): 172–209; Jacobson, "The president's effect on partisan attitudes"; Jacobson, "How Presidents Shape Their Party's Reputation and Prospects"; Jacobson, "The Obama Legacy and the Future of Partisan Conflict".

in the case of personalists or populists, rhetoric and electoral strategies revolve around creating an oppositional persona and purposefully breaking the rules of the game. Their political ideas spawn social and political divisions and help shape party systems which deviate from the strict institutionalist-social cleavage models.

Politicians' influence on parties is not restricted to a specific political moment. Leaders, their rhetoric, and leadership style can affect the composition, size, and competitive dynamic of the party system while in power, which we call "active ideas", or once they have left power, which we call "legacies". This is especially true with regards to less institutionalized party systems. However, even in developed presidential party systems, scholars have shown how political parties exhibit a tendency towards reorienting their positions and platforms around the ideas of their countries' presidents²⁸. This "presidentialization of parties" thus shapes not only the governing party, but attitudes towards politics from members of the opposition who must contest it.

Legacies matter, too. In this case, it is often political followers of the original leader who maintain and re-shape their ideological legacy. Again, this is apparent through a look at the way populist and personalist politicians often restructures partisan competition around (and against) a leader while the individual is alive or in office, and then how the subsequent composition of the party system also reflects that leader's legacy, from Juan Domingo Perón in Argentina to Alberto Fujimori in Perú and from Hugo Chávez in Venezuela to Rafael Correa

²⁸ Gianluca Passarelli (ed.), *The Presidentialization of Political Parties: Organizations, Institutions and Leaders* (Berlin: Springer, 2015); David Samuels, "Presidentialized Parties: The Separation of Powers and Party Organization and Behavior", *Comparative Political Studies* vol. 35, n. ° 4 (2002): 461–83.

in Ecuador. To reiterate, this is different from a politically salient social cleavage; in fact, the roles of political leaders' active ideas and legacies on shaping party systems should be stronger in places that lack strong pre-existing social cleavages—as is the case in many new and developing democracies. Likewise, authoritarian legacies should sustain in new democracies, with few other structuring ideologies or ideas.

Notably, legacies are enduring. Given their atemporality and elasticity, they can continue to play a structuring role in a party system despite the appearance of electoral reforms or social cleavages—especially when they are generationally imprinted. In fact, we argue that party systems will not change until a given political legacy is absorbed or buried by another set of salient political ideas. As the Chilean case shows, despite change to the party system following electoral reform in the mid-2010s, the country's politics continue to operate under the shadow of the Pinochet dictatorship.

While we subscribe to the idea that electoral arrangements matter and that their effect is generally mediated by patterns of social heterogeneity and their stability in time, we propose that their effect can be distorted by the effect of cross-cutting long-lasting political legacies. While sitting theories aim to explain why the number of parties increases or decreases, we seek to develop an understanding of survival and demise within variations. When party systems increase in size, which parties win? When party systems fall in size, which parties lose?

POLITICAL IDEAS AND REPRESENTATION IN CHILE

To investigate our research question, we focus on Chile, a presidential democracy by significant variation in institutional rules, social cleavages, and structuring political ideas since its inception. Over the almost 200 years since its first constitution, has experienced periods of burgeoning democracy, albeit with

periods of dictatorship, major sociological shifts, and multiple electoral reforms that have moved in both permissive and restrictive directions.

While these variations allow us to examine the evolution of the Chilean party landscape under a variety of circumstances, they also help us avoid several pitfalls that are commonplace in comparative scholarship. Because one independent variable of interest is electoral systems, adding too many countries to the sample would introduce unnecessary institutional heterogeneity to the point that the causal mechanism may be obscured.

Chile is also a good case to look at because of the rich tradition of party and electoral system studies. In this way, we seek to complement the literature that has sought to account for the evolution of the party landscape, yet has rarely considered how relevant political ideas have been to explain why some parties consolidate and others fail. This study seeks to bridge that gap.

Because our main objective is the party landscape we mainly rely on the number of parties as an indicator of size. We use the traditional measure proposed by Laakso and Taggepera²⁹ to compute both the effective number vote-winning parties (ENPv) as well as the effective number of seat-winning parties (ENPs).

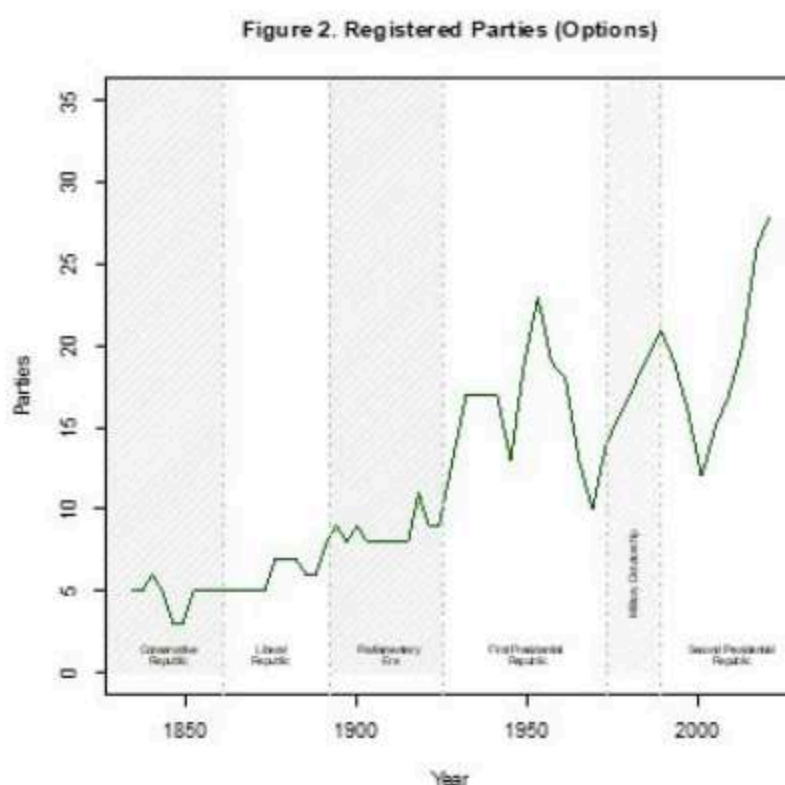

Ultimately, we seek to complement current theories on the determinants of the size of party landscapes with an understanding of shape of party system. In short, the idea is to propose a theory that is able to explain which type of parties enter the party system when it is predicted to expand, and which parties exit when it is expected to shrink. Our account suggests that political legacies become salient in this definition. Parties

²⁹ Mikael Laakso and Rein Taagepera, "'Effective' number of parties: a measure with application to West Europe", *Comparative political studies* vol. 12, n. ° 1 (1979): 3–27.

that survive particular moments or processes of party system alignment or dealignment are those that represent or antagonize the political ideas of specific leaders or legacies.

1. Evolution of Chilean Party Competition Patterns

Figure 2 shows a summary of the evolution of party competition patterns in Chile since 1833, the year the first major constitution was inaugurated. The green line represents the unweighted number of political parties that competed in elections in the same timeframe (it includes an aggregate category for independents). The shaded regions represent the span of major historical political cycles (note that these may or may not coincide with social cleavages). Generally, the pattern shows that the number of parties has grown over years, irrelevant of the moment in history.

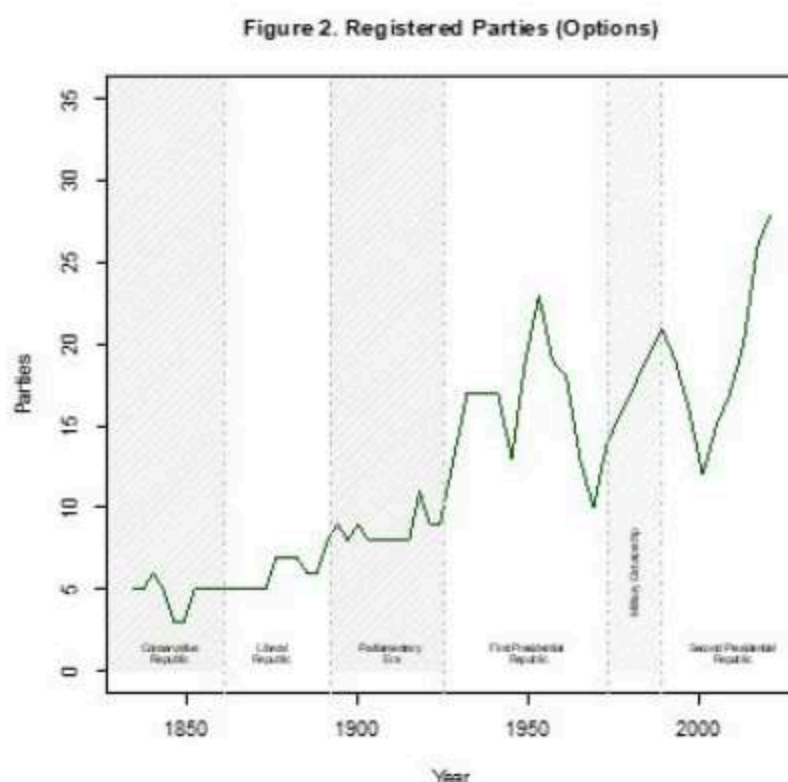

It is worth mentioning that before 1925, the franchise was limited to the elite through property restrictions. As such, elections in that early period cannot be considered democratic by contemporary standards. After 1925, however, the proportion of the voting age population slowly began to increase. It began with the abolishment of property requirements, and followed with the passage of women's suffrage in 1949. This last reform alone nearly doubled the share of eligible voters. While the incorporation of the effective secret ballot in 1958 significantly improved the country's electoral quality, the enfranchisement of illiterates in 1970 accounted for a spike in the percentage of eligible voters as well as its democratic credentials. After the return to democracy in 1989, the system boasted universal adult suffrage and although turnout steadily decreased thereafter, the country has since been considered among the most democratic in the world.

This long, varied political history proves why Chile is a useful case to examine the effects of social cleavages, electoral rules, and political legacies on the shaping of party systems. In the remainder of this section, we assess how each of these variables have influenced the evolution of party systems over time.

2. Social Cleavages

Figure 3 shows the evolution of the effective number of political parties over time. The red line represents the effective number of electoral parties (ENPv) and the blue line represents the effective number of legislative parties (ENPs). It is important to note that because the objective of this chapter is to track the evolution of parties, and not electoral lists, we focus on the former. The number of lists is naturally lower than the number of parties. The shaded regions in Figure 3 represent the span of major social cleavages.

The first major social division (Republican-Federal) can be understood as a function of the independence from Spain and a backlash to the resulting balance of power following foundation in the 1820s. At the time, the main political debate revolved around the administrative and legal structure of the Republic. While some fell on the side of the position laid out in the 1833 Constitution, others sought to further rights for the regions. In a way, the debate separated the Conservative party from the Liberals and the Federalists.

Scully³⁰ proposes that three major social divisions (or cleavages) followed thereafter, the first of which was defined by the clerical-anticlerical conflict that occurred in the late 1850s. As a result of the episode, the two-party system that had hitherto dominated, expanded into a three-way system, in which the

³⁰ Timothy Scully, *Rethinking the Center: Party Politics in Nineteenth- and Twentieth Century Chile* (Stanford, Calif: Stanford University Press, 1992).

Liberals displaced the Conservatives as the main party, and the Radical party made its entrance into legislative politics. We refer to this cleavage as the Church-State divide.

The second major cleavage, according to Scully³¹, was the class conflict that took place at the beginning of the twentieth century. This once again realigned political competition and generated the emergence of new workers' parties, such as the Socialist Party. We refer to the cleavage as the Urban Conflict. This was around the time that the Parliamentary Era (1891-1925) came to an end, the second major constitution was drafted (1925), and the first Presidential Republic (1925-1973) began.

The third cleavage, the second in the twentieth century, was the one that was set forth after mass migration took place in the late 1940s and 1950s. The arrival of massive groups of rural workers and the entrepreneurial development of the countryside (mainly south of the capital, Santiago) led to a cycle of new demands in voters and supply in the elite. Among other latent effects, it encouraged the creation of the Christian Democratic Party. We refer to this happening as the mass migration cleavage. Its effect lasted until the breakdown of democracy in 1973.

Some have suggested that the dictatorship itself can be considered a cleavage, as its mere presence divided elites and voters equally. Tironi and Agüero³² understand the transition to democracy as a "generative" fissure. While some have been

skeptical³³, other have showed its centrality in conditioning political competition in post-Pinochet Chile view³⁴.

While we do find general support for this account, Figure 3 shows that the association between the effective number of parties (both electoral and legislative) and social cleavages is weak. Indeed, it shows that in the first three bins, which mark the general area of influence of each cleavage, the number of parties only increases. In the fourth bin, given by the mass migration cleavage, the number of parties moves both up and down, indicating that the variation must be influenced by yet another variable. Yet, this is not surprising, as theory indicates that because cleavages alone cannot explain the evolution of party systems, it is important to consider electoral institutions.

3. Electoral institutions

Figures 4A and 4B show the influence of electoral institutions on the number of parties over time. Since most of the literature concedes that the number of seats is the most important determinant from the institutional perspective³⁵, we follow the criteria of Lijphart (1990), as applied by Bunker and Ne-

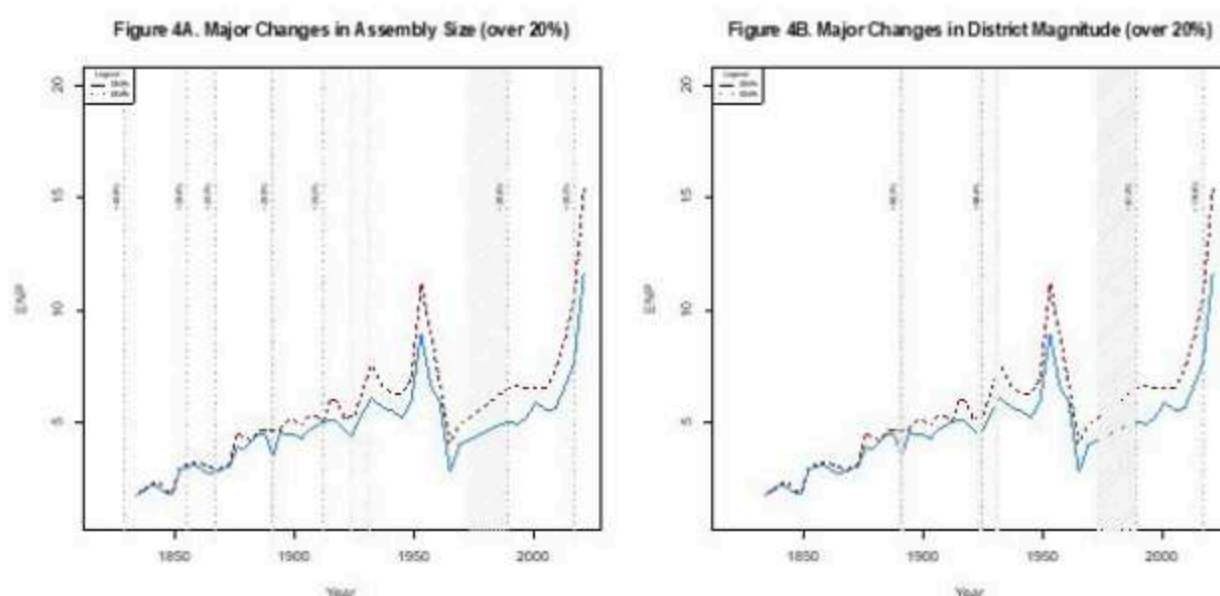

³³ See Peter Siavelis, "Electoral system, coalitional disintegration, and the future of Chile's Concertación", *Latin American Research Review* vol. 40, n. ° 1 (2005): 56–82.

gretto³⁶, and mark all reforms that shifted the value of either the assembly size (Figure 4A) or the district magnitude (Figure 4B) by at least 20%, between 1833 and 2023.

In the case of the assembly size, Figure 4A shows that there were two reforms that significantly decreased the size of the legislature—one in 1891 and one in 1989. While on the first occasion the reform was followed by a drop in the effective number of parties, on the second occasion the opposite seems to be true. On the other hand, it shows that there were five reforms that significantly increased the size of the assembly. In these cases, the evidence of causality is mixed. In some cases, the reforms are followed by an increase in the ENP and in others they are not. In some situations, increasing the number of seats in the lower chamber resulted in a higher number of electoral parties but a lower number of legislative parties.

³⁶ Kenneth Bunker and Gabriel Negretto, "The Party System Effects of Unstable Electoral Rules in Latin America", *Party Politics* vol. 0, n. ° 0 (2023): 1-17. <https://www.researchgate.net/publication/373710117>
[The party system effects of unstable electoral rules in Latin America](https://www.researchgate.net/publication/373710117)

Figure 4B does not clarify the inconsistency. Of the four major reforms to district magnitude in the almost 200 years revised in this study there is just one that had an undoubtedly significant impact on the party system in the predicted direction. Indeed, after increasing the district magnitude from 2 to 5.5 in 2017 (29.2%), the number of parties increased significantly. On all other occasions, the evidence is mixed.

Part of the problem with the persistent unexplained gap may be that electoral rules can create disparate incentives which offset one another. It is possible that within the same electoral reform both the assembly size decreases, inviting more parties to compete, and the district magnitude increases, inviting fewer parties to compete. And, in fact, this occurs in Chile. In the electoral reform conducted in 1891, the assembly size fell from 127 to 94, while the district magnitude increased from 1.95 to 3.13. So, what are the incentives of the reform?

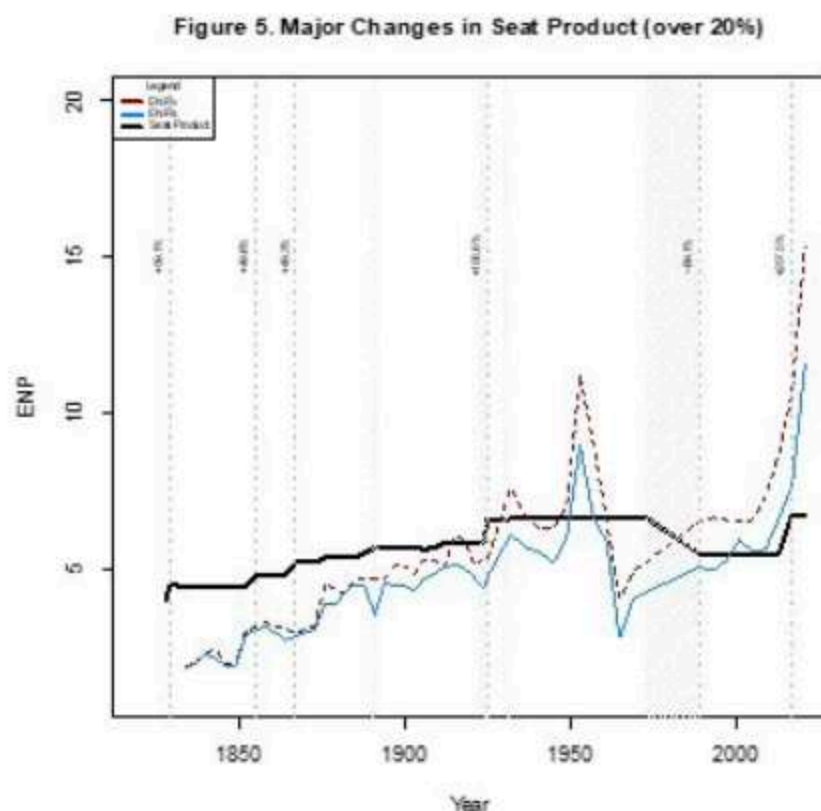

To get around this question, Taagepera and then Shugart and Taagepera³⁷ propose the seat product model (SPM), in which they suggest that the true incentive of electoral rules can only be seen through the interaction between the size of the assembly and the district magnitude. While they propose a sophisticated manner of deriving the expected number of parties from the product, we suggest that the product suffices to understand the incentive³⁸.

³⁷ Taagepera, *Predicting Party Sizes*; Shugart and Taagepera, *Votes from Seats*.

³⁸ Two of the four of Shugart and Taagepera's basic laws of seats and votes are 1) the law of number of assembly parties, and 2) law of number of electoral parties. The first of these predicts that the effective number of parties in an elected assembly (N_s) should equal $(MS)^{1/6}$ where M is the mean district magnitude and S is the number of seats in the assembly. The second predicts the most likely number of parties in assembly elections (N_v) is equal to $[(MS)^{1/4} + 1]^{2/3}$, where M and S again stand for district magnitude and total assembly seats, respectively.

Figure 5 shows the logarithm of the seat product (thick black line) and the effective number of parties (blue and red lines) over time. Vertical dashed lines represent 20% increases or decreases of the seat product in reference to the previous election. Theoretically, the expectation is that a significant increase in the seat product will lead to a significant increase in the number of parties and vice versa.

Remarkably, the lines seem to run parallel up until 1925. This is consistent with theory. The problem, however, is the magnitude of the gap. Why do the lines fail to overlap? We argue that because before 1925 there was no real democracy, it can be explained as a natural function of the pseudo-authoritarian system in which elites collaborated to reduce the size of the party system in their favor. Not only does this explain why there is a gap before 1925, but it also explains why there is no such consistency after 1925.

After 1925, a gap emerges in both directions. Sometimes there are more than the number of predicted parties and sometimes there are fewer. In the period surrounding the inauguration of 1925 Constitution, the real number of parties is both over and below the expected number of parties (as represented by the SPM). Around 1950, the real number of parties far exceeds the prediction before it falls below it. In this way, there appears to be no association between the seat product and the number of parties. It is important to note that when the SPM is compared to the number of electoral lists in the post-1990 era representing coalitions of parties, the prediction is accurate.

In sum, before 1925 the effect cannot be tested, and after 1925 each variable alone or both variables together do not seem to be able to explain the variations in the party system in the first presidential republic or the early days of the second presidential republic. So, what explains differences? We suggest that there is a third force in play, and propose that it can be represented by political ideas or political legacies of the day. We now turn to this third variable.

4. Explaining the Gap: Political Legacies

Compared to mainstream sociological and institutional accounts, which often focus on the interaction between various factors, there has been less attention paid to the role of political ideas. Valenzuela³⁹, however, offers an important perspective by arguing that the Chilean party system has historically structured itself not only around state/church conflicts, massive migrations, and ideological divisions fueled by socioeconomic programs, but also around specific political leaders and

³⁹ Samuel Valenzuela, "Orígenes y transformaciones del sistema de partidos en Chile", *Estudios Públicos* n.º 58. Epub ahead of print 1995.

their legacies. We expand on this view, contending that these polarizing—or sometimes unifying—factors are essential to understanding the evolution of Chile's party landscape.

For instance, between 1831 and 1856, the influence of Chilean statesman Diego Portales was instrumental in maintaining the Conservative Party's dominance. Even after his assassination in 1837, Portales' legacy endured under the regime known as "*el peso de la noche*" ("the weight of the night"), allowing his party to remain in power for nearly thirty years⁴⁰. Remarkably, after this period, the Conservatives never elected another president.

The impact of Portales' legacy waned in the late 1850s, coinciding with the reelection of the conservative president Manuel Montt. Montt, a significant political figure, and his vice president founded the National Party, also known as the *Montt-Varista* party. This party played a pivotal role in Chilean politics, electing the next president, José Joaquín Pérez, and maintaining influence in the legislature for decades, often serving as a swing party⁴¹.

The era of *Monttvarismo* ended with the rise of José Manuel Balmaceda, a prominent politician who, after a successful career, was elected president in 1886 and remained in power until his death five years later. Balmaceda's influence shaped political ideas from 1891 to 1925, particularly following the crisis that led to his death and the adoption of a political system that shifted power from the presidency to parliament⁴².

⁴¹ See Enrique Brahm, *La crisis del conservantismo chileno en la segunda mitad del siglo XIX: política, gobierno y régimen de gobierno en el itinerario intelectual de don Ramón Sotomayor Valdés* (Epub ahead of print, 1992).

⁴² Karen Remmer, "The timing, pace and sequence of political change in Chile, 1891-1925", *Hispanic american Historical review* vol. 57, n. ° 2 (1977): 205–230.

Balmaceda's influence began to diminish in the late 1910s with the emergence of Arturo Alessandri⁴³. Alessandri, a famous senator, came to power in 1920 but was forced into exile in 1924. However, he soon returned, bringing with him a new constitution approved by Congress in 1925⁴⁴. Alessandri's influence, reinforced by this constitution, persisted for at least two decades. He was reelected for a second term in 1932⁴⁵. Under his leadership, Chile experienced significant changes, not only due to urban conflict but also because of the electoral system reforms in the 1925 constitution, which encouraged the formation of new parties.

Carlos Ibáñez del Campo's rise as a counterbalance to Alessandri shifted the political landscape. Although Alessandri was followed by three Radical Party presidents (Pedro Aguirre Cerda, Juan Antonio Ríos, and Gabriel González Videla), Ibáñez's influence permeated the system. After his brief presidency from 1927 to 1931, his military legacy cast a long shadow over Chile for two decades⁴⁶, culminating in his return to power from 1952 to 1958. His government marked the transition from a system dominated by the Radical Party to the "three-thirds" era.

This era began with the conservative presidency of Jorge Alessandri (1958-1964), followed by the centrist leadership of

Eduardo Frei and the Christian Democrats (1964-1970), and concluded with the leftist presidency of Salvador Allende and the Socialist Party (1970-1973). Throughout this period, Salvador Allende's influence was unparalleled⁴⁷. The Socialist Party competed in three elections (1952, 1958, 1964) before Allende was finally elected. During this time, Allende also served as an influential senator for four consecutive terms.

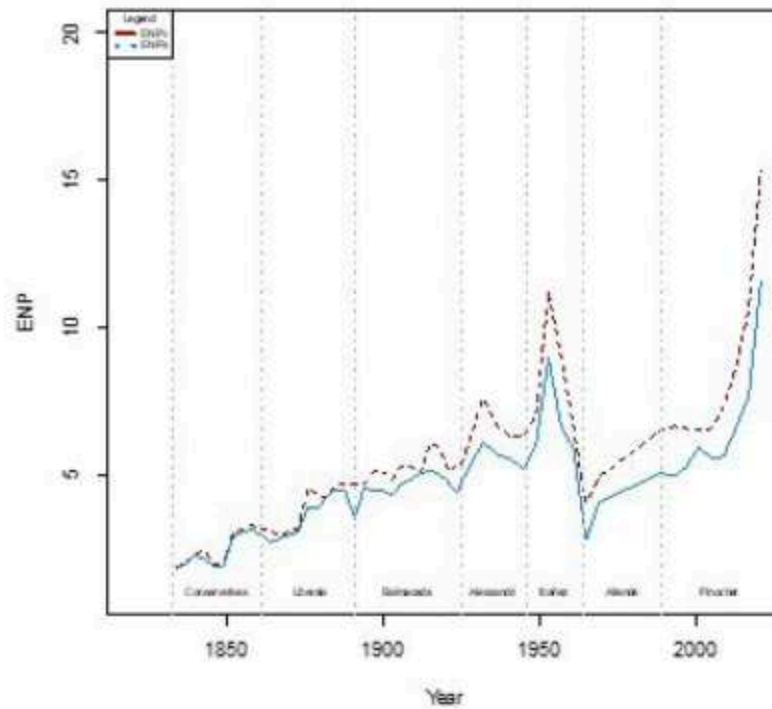

Allende's influence naturally waned after the 1973 coup, but it never fully disappeared, even during Pinochet's dictatorship. Party organizations remained active and persisted through the democratic transition. Valenzuela⁴⁸ argues that Pinochet's influence as a political legacy truly began in the mid-1980s. It solidified during the 1988 and 1989 plebiscites and continued to shape the party structure into the 1990s.

Figure 6 illustrates the periods of influence of these political figures, their ideas, and their legacies. Unlike previous figures, these timelines more accurately reflect the variations in party system size. While these factors alone do not fully explain shifts in party landscapes, they significantly contribute to the underlying context.

⁴⁷ See Brian Loveman, "Government and regime succession in Chile", *Third World Quarterly* vol. 10, n. ° 1 (1988): 260–280.

Figure 6. Influential Political Figures and Age of Influence

POST-2013 REALIGNMENT OR CONTINUATION OF THE PAST?

The 2017 legislative elections represented a clear break in the party system landscape and in the patterns of representation⁴⁹. Indeed, the jump in the number of parties and deviations from the SPM's expectations warrants a closer inspection. If the party system underwent a significant shift, we would expect to see both major social occurrences and new parties emerge as others exit the system. Such changes would indicate either dealignment or realignment⁵⁰. By comparison, dealignment would indicate a period of change following a possibly

⁴⁹ Kenneth Bunker, "La elección de 2017 y el fraccionamiento del sistema de partidos en Chile", *Revista Chilena de Derecho y Ciencia Política* vol. 9, n. ° 2 (2018): 204–229.

⁵⁰ John Dalton 1984, 11

transitory decoupling of voters from established parties, while realignment would indicate a fundamental and durable shift in the overall level of support for all or most political parties in the system.

One way to measure realignment is to observe changes in the dimensionality of political issues. This would be able to capture the erosion of unidimensionality (e.g. anti- and pro-*pinochetista* divisions) and rise of multidimensionality (e.g. economic issues, environmental issues, indigenous/Mapuche rights, women's rights, etc.). Another way of measuring realignment would be by looking at the activity of minor political parties and movements, and how these entities influence representation⁵¹. If there were evidence of a significant increase in the number of grass root movements, it would be likely to come at the cost of traditional parties. In either case, the implication would be a threat to the existing party landscape.

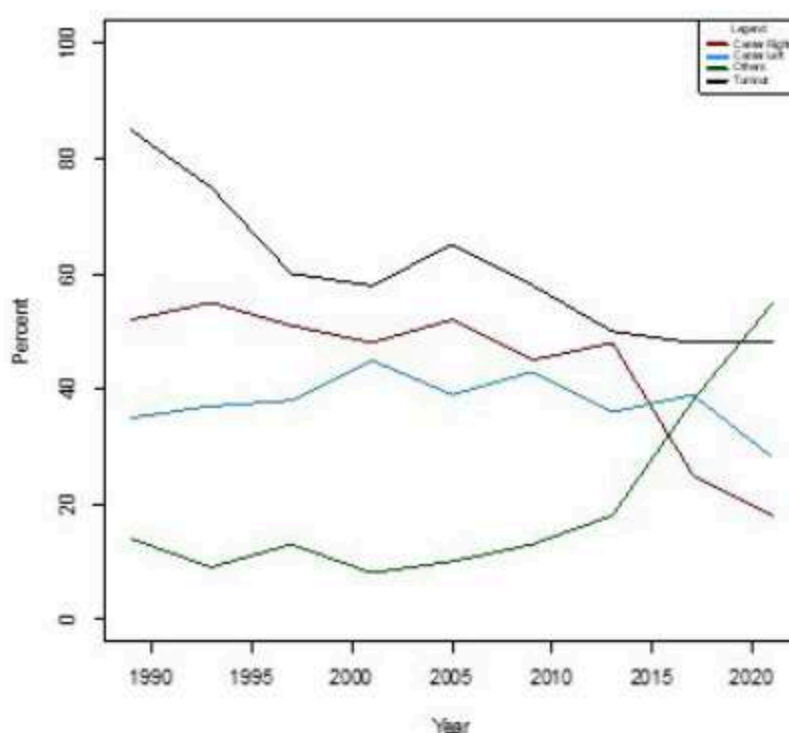

Remarkably, under these definitions, the evidence fits the theory, as it seems likely that in the period captured between 2009 and 2017, both factors were at play. On the one hand, it is clear that as anti- and pro-Pinochet sentiment faded, new economic, environmental, indigenous and gender issues have come to the forefront. Furthermore, evidence suggests that in this time, ideological and partisan identification levels have declined, and especially among younger segments of voters. Survey results from the *Centro de Estudios Políticos* reveal that the category of no party identification surpassed that of the center left “*Concertación/Nueva Mayoría*” and the center right “*Alianza/Chile Vamos*” coalitions in 2006, at around 40 percentage

⁵¹ Jack Nagel, “Social Choice in a Pluralitarian Democracy: The Politics of Market Liberalization in New Zealand”, *British Journal of Political Science* vol. 28, n. ° 2 (1998), 234.

points, and has steadily increased since that time to 60 percent versus less than 20 for either of the two traditional coalitions⁵².

This disillusionment with the statu quo is reflected in the vote share for each coalition. Support for the Concertación and the Alianza was consistent throughout the 1990s and 2000s before cratering for the Concertación from 47 percent in 2013 to just 17 percent in 2021. Meanwhile, support for other party lists rose from 7.8 percent in 2001 to 9.5 (2005), 12.2 (2009), 16.1 (2013), 37.3 (2017), and 57.4 (2021), reflecting rising citizen discontent with the statu quo.

Figure 7. Vote share and voter turnout (1989–2021)

⁵² Rossana Castiglioni and Cristóbal Kaltwasser, "Challenges to Political Representation in Contemporary Chile", *Journal of Politics in Latin America* vol. 8, n. ° 3 (2016): 3–24.

Although some scholars, such as Raymond and Feltch and Raymond⁵³, argue that a partisan realignment was already underway in the early 2010s, when religious voters shifted their loyalties from the parties of the left to the parties of the right, the evidence seems to indicate that there was more of a dealignment than a realignment in the party system. Voters reconsidered their fidelity to existing parties, but did not have any parties to switch to, as the supply of the party system did not yet offer any alternatives. Still, it seems likely that at that time, the party system was at the edge of a fundamental and durable shift.

Between 2010 and 2021, several things happened. In 2011, Congress approved a change from voluntary voter registration and compulsory voting to automatic registration and voluntary voting. The reform significantly increased the number of eligible voters, democratizing the vote⁵⁴. The entrance of a cohort of younger voters that did not fall in line with the authoritarian-democratic divide has been used as evidence to indicate a warning that things were changing at the demand side of elections (2021). An even more consequential change was the electoral reform of 2015, which increased both the district magnitude and the size of the assembly⁵⁵. As expected by the

⁵⁵ Kenneth Bunker, "¿Cuáles son los efectos del sistema electoral propuesto por el consejo constitucional de 2023?", *Ideas* vol. 1, n. ° 4 (2023): 1-4.

SPM, the party system fragmented shortly thereafter, breaking with the existing order. The change in the electoral pattern was stark. The vote share of the two major coalitions, which had taken over 95% of the votes and 95% of the seats, fell to just two-thirds in 2017.

In sum, between 2010 and 2017 not only did the number of eligible voters increase, but the number of political parties as well. Naturally, the fundamental authoritarian-democratic division began to fade as new issues came to the forefront. All this occurred across the timespan of the first government of Piñera (2010-2014) and the second government of Bachelet (2014-2018). Analogous to the tension between Alessandri and Ibáñez, Bachelet and Piñera seemed to jointly provide the institutional conditions for a new party landscape. Yet, their influence did not stop there, as it was under their governments that the most important new parties were founded. In fact, no other party founded after the transition was more successful in their debut as those under the Piñera and Bachelet governments; in particular, the left-wing *Revolución Democrática* and the right-leaning *Evolución Política*, which took a relevant portion of the votes and seats way from their natural competitors, the Concertación and Alianza.

The missing piece of the puzzle is the 2019 *estallido social* (Social Outburst). Without this, it would be impossible to explain the party system which took place after the 2017 elections. Indeed, the partisan fragmentation of 2017 exposed many of the multidimensional issues that had been percolating. As traditional parties began to collapse as part of the dealignment process, citizens took to the streets to protest against the existing order. Under the impression, that “things had changed”, they forced the political class to initiate a constitutional process which would not only further the importance of multidimensional issues, but also further fragment the party system.

The electoral results of 2021, in which the new left would continue to make massive gains against traditional left, and the electoral results of 2022, in which the new right would make an impressive debut capturing almost all of the traditional right votes, are clear indications of the interactive effect of these factors. At the very least, it provides support for the theory that the fragmentation of 2017 was not temporary, but the start of a longer process.

Eventually, the left-wing parties born as an effect of the 2015 electoral reform and the right-wing coalition born as a reaction to the rise of the left would each dominate one constitutional process. Neither would be successful, as both of their proposals would be rejected. But their very rise to the top cannot be ignored and discarded because of their failure. Both sectors would continue to rise in ranks over time. The *Frente Amplio* would come to the presidency with Gabriel Boric, and *Republicanos* would rise to control the majority vote in the Senate.

While the traditional parties did not disappear, they did fade away. The realignment that occurred in Chile is the product of a non-trivial sequence of events that began with the 2015 permissive electoral reform. While there were early signs of fragmentation, they were kept at bay until the social outburst of 2019. It was only then, in the midst of an unstable political scenario, that the incentives of the electoral rules began to be noticed. In essence, the institutional legacy of Bachelet and the social legacy of Piñera are directly tied to the resulting party system and its new form of representation. In the absence of a significant institutional reform or of a major social outburst, there is no indication that a realignment would have occurred.

CONCLUSIONS

This chapter aimed to explore the emergence of new party landscapes in consolidating presidential democracies. It re-

viewed mainstream political science and sociology literature, focusing on institutional and cleavage theories as key frameworks for explaining shifts in party structures. Additionally, it examined the role of political ideas—particularly those expressed through political leaders, their legacies, and mechanisms of representation—as crucial factors in understanding why some parties emerge while others fade.

Using the Chilean party system as a case study, we demonstrated that the rise and fall of multiple party systems since 1891 can be attributed to sociological shifts and concurrent electoral reforms. However, as political behavioral literature suggests, political leaders and their legacies and how they represent their bases have also significantly shaped not just macropartisanship but the party systems themselves. While electoral reforms can explain party system fragmentation, they do not pinpoint where the major fault lines develop. Conversely, politically salient cleavages indicate where these divisions lie but fail to explain whether a party system will expand or collapse. It is ultimately political ideas and representation that drive realignments.

Although there is substantial evidence on how electoral reform and sociological shifts define party systems, less attention has been given to the role of political legacies and representation. A comprehensive understanding of the elements shaping the party system landscape can help clarify alignment, dealignment, and realignment processes. Conversely, by considering natural changes and continuities in electoral outcomes, this chapter identifies critical breaking points in the Chilean party system over more than a century, proposing a simple theoretical framework to account for the evolution of the party landscape.
